

Copy-number-aware gene enrichment: what v5 can claim

PHR/subtelomeric genes recur across arms and haplotypes. The slide assets use canonical HPRCv2 arm/community support, not parked weighted-ORA p-values.

Use wording such as 'copy-aware support' or 'copy-number-aware candidate signal'. HPRCv2 community-family Fisher tests: 116 rows, 0 BH-significant; minimum q=0.071.
