

CHM13 PHR Hi-C contact-space MDS

3D MDS rendered as two readable projections; color = sequence community. n=38 arms; Mantel rho=0.656, p<1e-4; sequence-community contact enrichment p=3.5e-05

Caption: CHM13 Hi-C contact-space MDS over PHR/subtelomeric arm regions from chm13_subtelomeric_regions.bed at 50 kb resolution, shown as D1-D2 and D1-D3 projections of a 3D MDS. Colors mark sequence-defined subtelomeric communities; nearby points indicate similar bulk Hi-C contact profiles. This is contact-space MDS from bulk Hi-C, not a physical single-cell genome reconstruction.
