

The fat-right-tail facets are the abstract's clades

C	Arms (outlier facets)	Named clade ... why the tail is long
C7	13p, 14p, 15p, 21p, 22p	acrocentric short arms ... fully homogenized (rDNA-adjacent)
C14	Xq, Yq	PAR2 ... pseudoautosomal q-end (~334 kb scale)
C15	Xp, Yp (+18q, n=1)	PAR1 ... pseudoautosomal p-end
C1	4q, 10q	4q...10q DUX4 / D4Z4 ... long-tail, copy-number diverse
C2	10p, 18p	10p...18p ... Linardopoulou 2005 pair

Pink facets (2p, 3p, 5p, 8q, 11q, 14q) = introvert arms, no cross-chrom hits.
