

Whole-genome homologous inheritance context with non-homologous winners

Light-gray ribbons are same-chromosome father-child homologous runs; colored ribbons are interchromosomal winners from the same 10:10 IMPG scan.

Light gray: 378 paired same-chromosome competitor runs for interchrom-over-same windows; colored overlay: 59 non-homologous runs.

All tracks use native whole-genome coordinates collapsed into length-scaled chromosome-order tracks.
