

Dip-C: sequence similarity distance vs mean 3D distance

Each dot = one inter-chromosomal arm pair; distance = mean across all cells

ARM-LEVEL Mantel test: X = pre-computed arm-level Jaccard distance (1 – mean Jaccard across all haplotype sequence pairs per arm pair). Y = Euclidean 3D distance averaged across cells (per-haplotype terminal 300 kb mean position). 528 arm pairs, 39 within-community.
