

ED1a — pipeline overview

83.2% of flanks (15,668 / 18,827) carry an inter-chromosomal match;
41 of 48 arms enter the community partition (7 zero-signal arms removed)

classify_contigs.py

extract_telo_flanks.sh

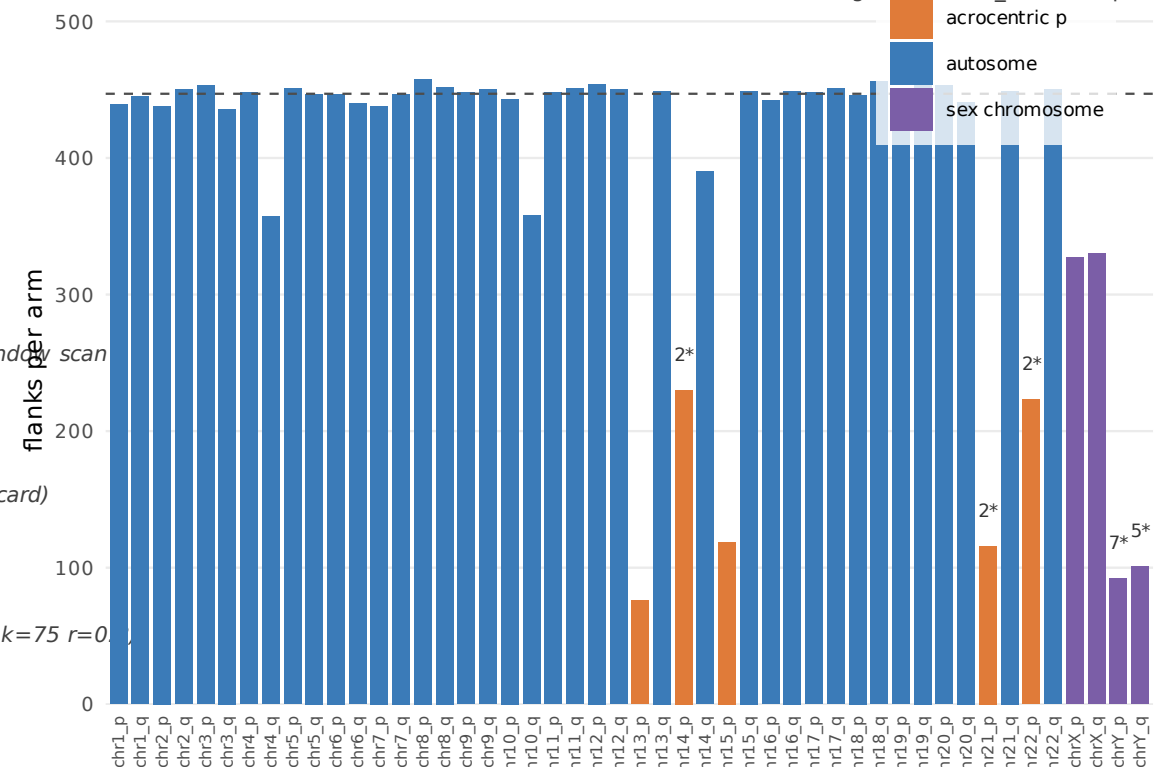

wfmash + impg sliding-window

pggb + odgi similarity (jaccard)

Leiden (arm: $r=1.16$; seq: $k=75$ $r=0.9$)

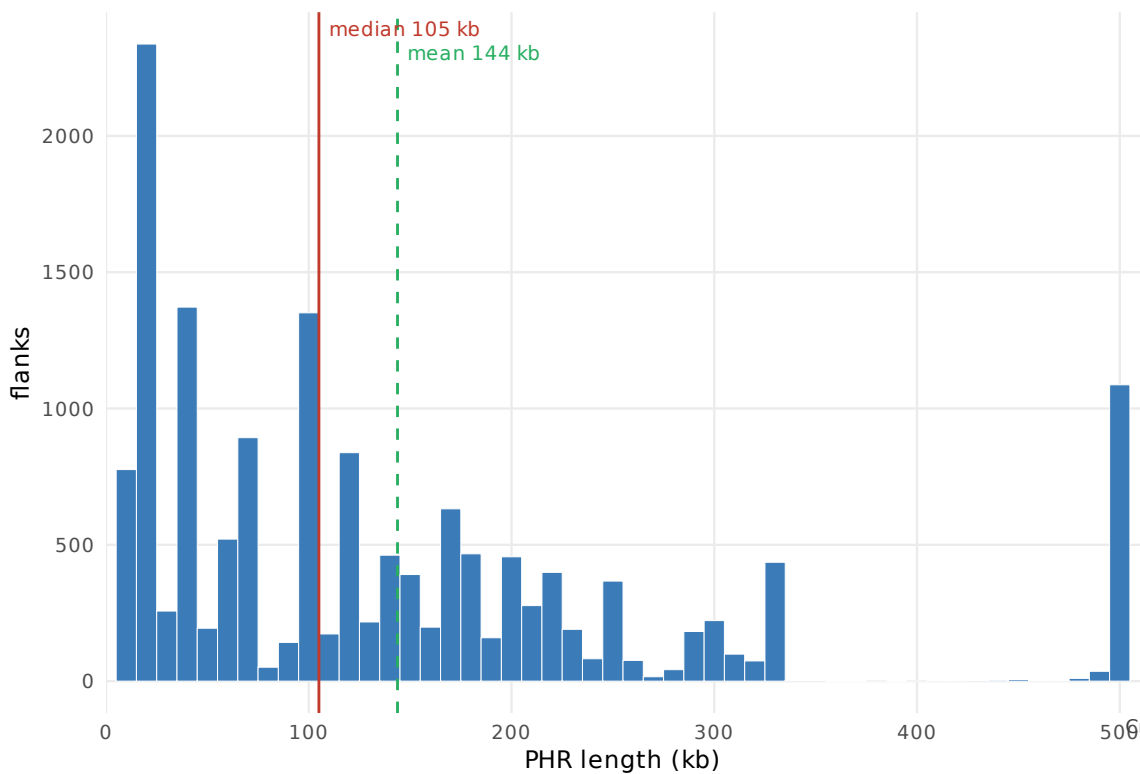

ED1b — per-arm flank inventory (48 arms)

Total 18,826 flanks (median 447/arm); * = mixed-strand-caveat contigs (validation_status != pass)

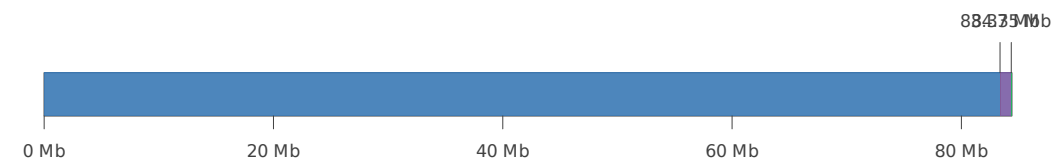

ED1c — PHR length distribution

n = 15,668 signal-bearing flanks (83.2% of 18,827)

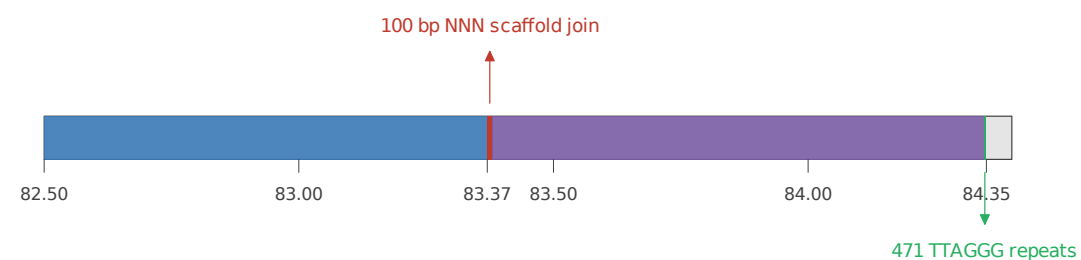

ED1d — chr18_q chimera (NA18982#1, JKBABS010000018.1)

chr18 segment (blue), NNN scaffold gap (100 bp) (red), chrX PAR1 (966 kb, mapq 60) (purple), (TTAGGG)_n × 471 (2,826 bp) (green)

zoom: junction region (82.5 — 84.4 Mb)

gross-aligner agreement: wfmash v0.23.0 + minimap2 v2.30 both report mapq 60 chrX PAR1 alignment for the 966 kb terminal block

Sequence dropped from PHR set (15,669 → 15,668).
