

Erdos–Renyi connectivity check for the implicit pangenome graph

At $n = 18,827$ flanks, $p^* = \log(n)/n = 5.23e-4$; wfmash evaluates $\sim 12\%$ of pair space

Threshold curves adapted from ekg/erdos_renyi@d9ec48f; HPRC point uses $n = 18,827$ and $p \sim 0.12$.
