

Fig5 whole-genome target support: PAN027 maternal hap1 <– PAN010 mother

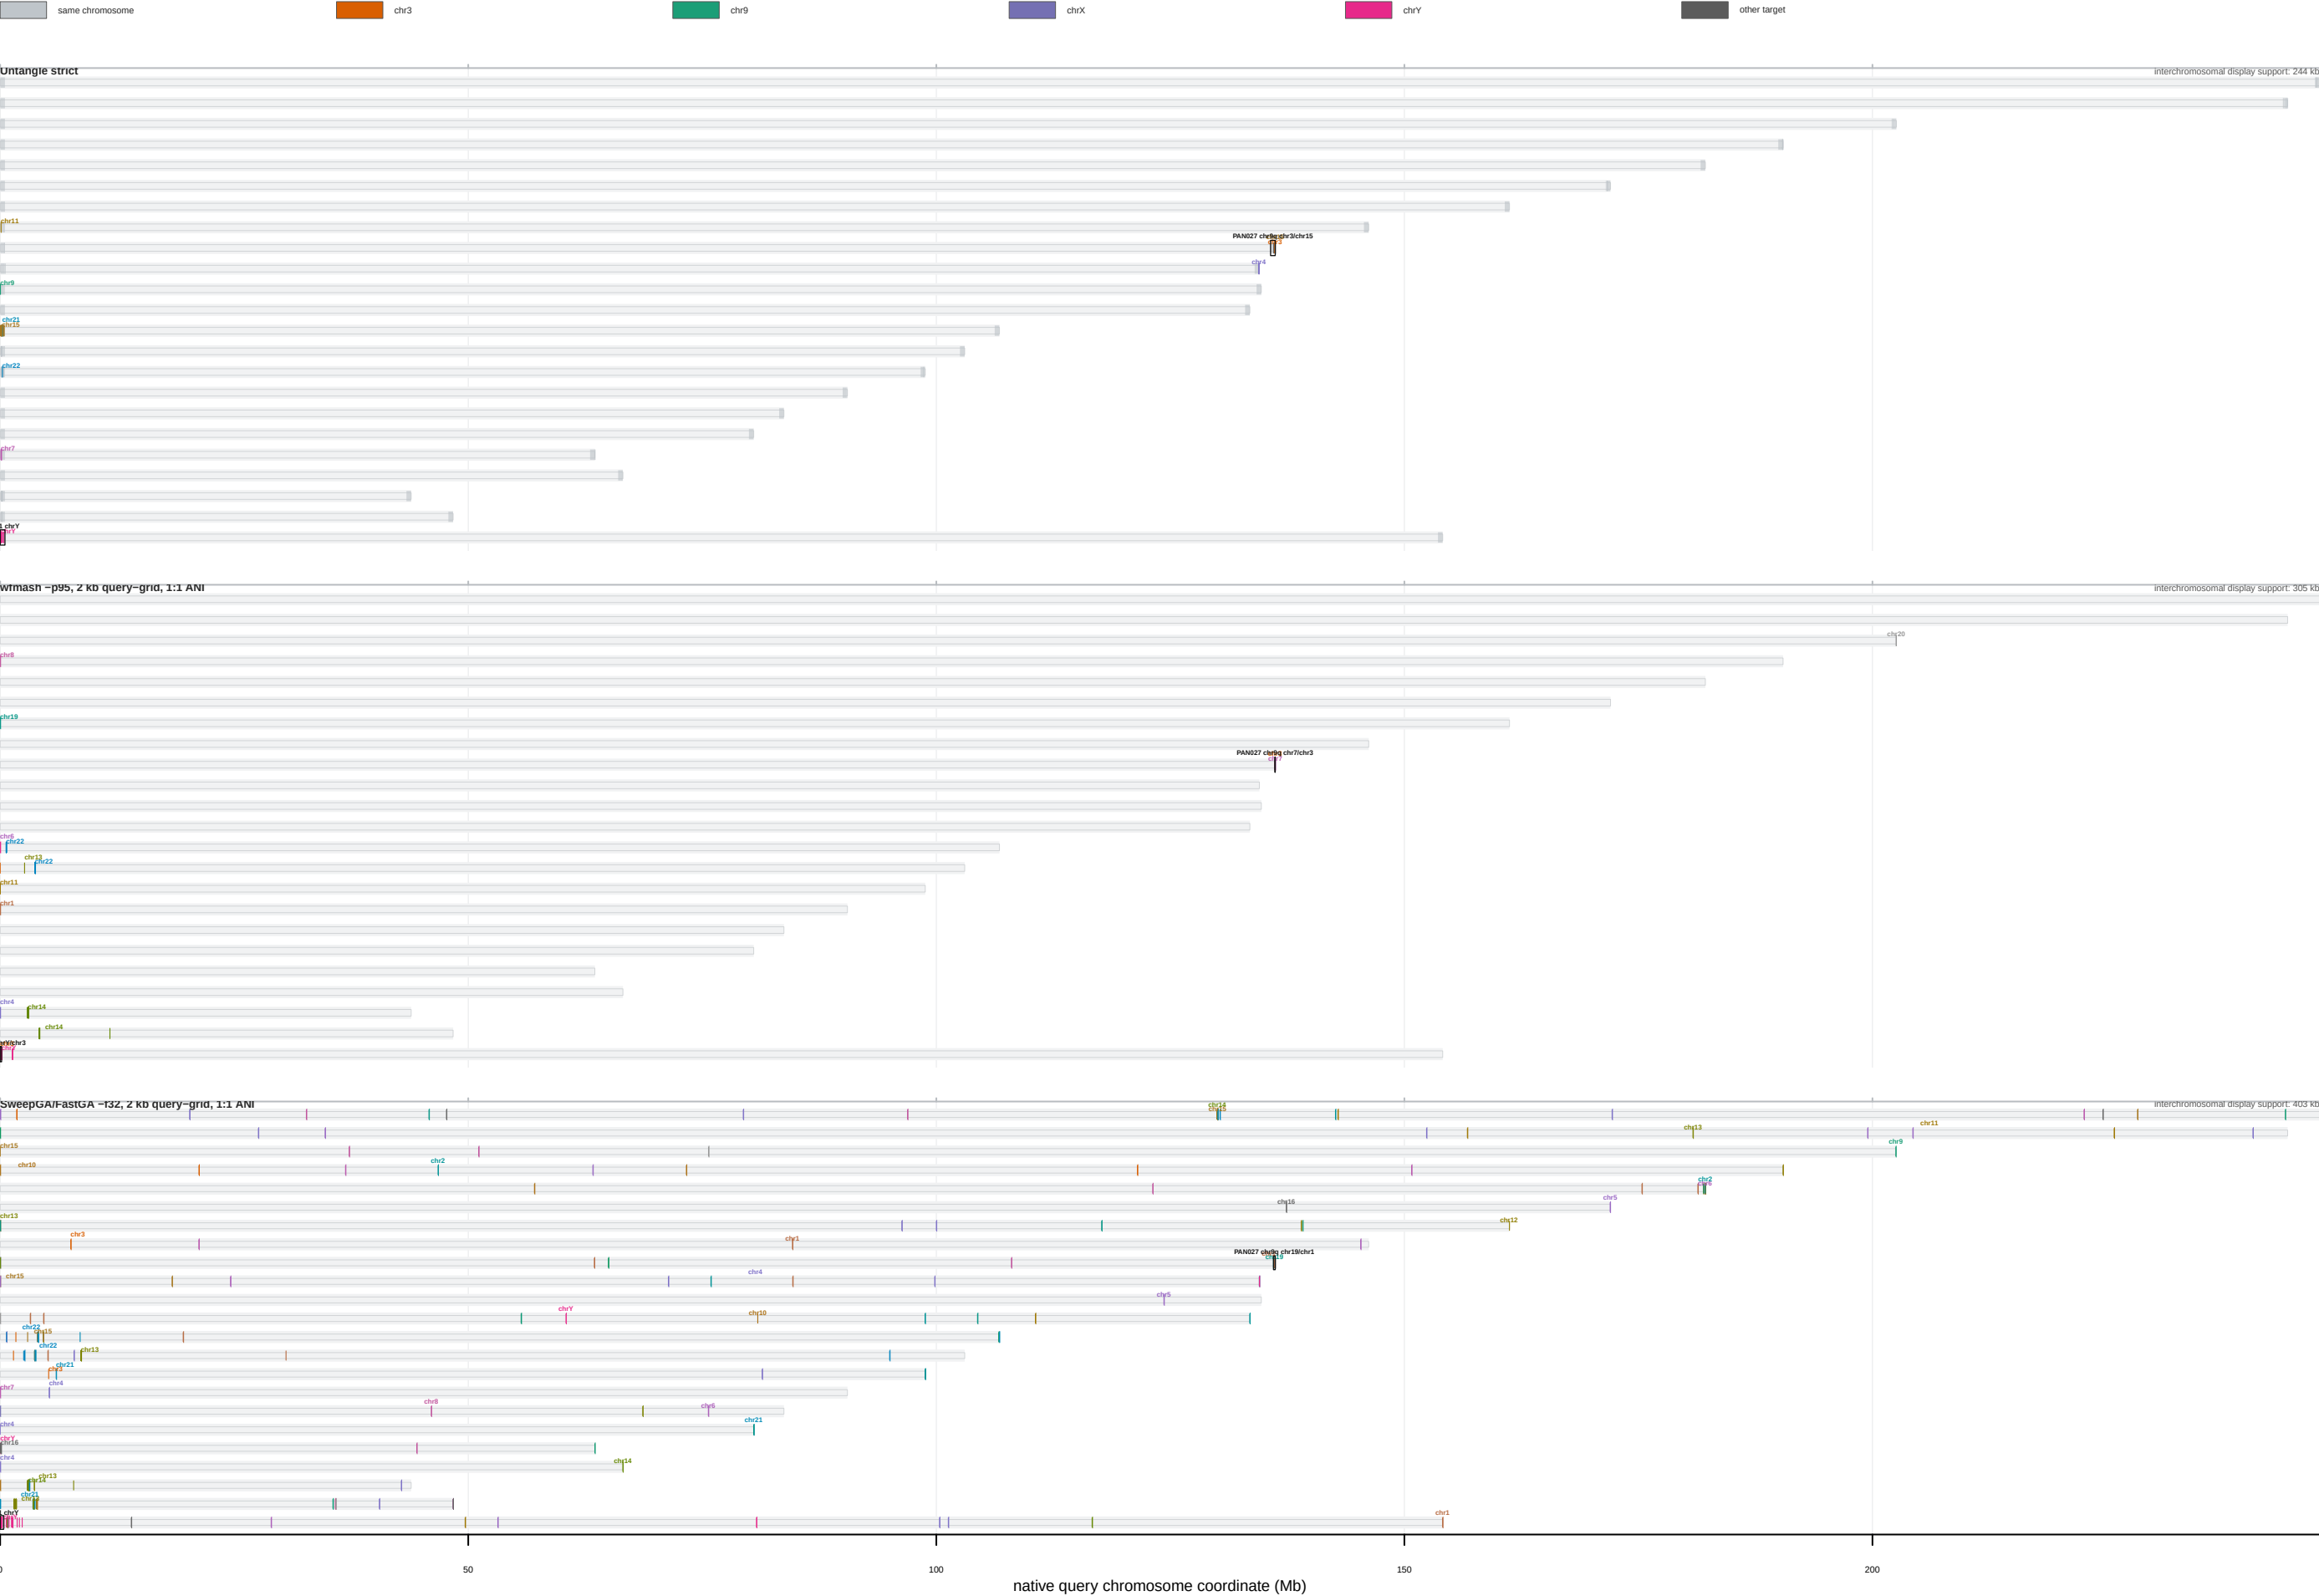

Each chromosome is one native query-coordinate row; row length is proportional to actual query chromosome length. Colored ticks/blocks mark retained interchromosomal target support.

No configured PAR/chr9q candidate window for this queried haplotype

Fig5 whole-genome target support: PAN027 paternal hap2 <- PAN011 father

Each chromosome is one native query-coordinate row; row length is proportional to actual query chromosome length. Colored ticks/blocks mark retained interchromosomal target support.

Candidate-window zooms: exact native query intervals

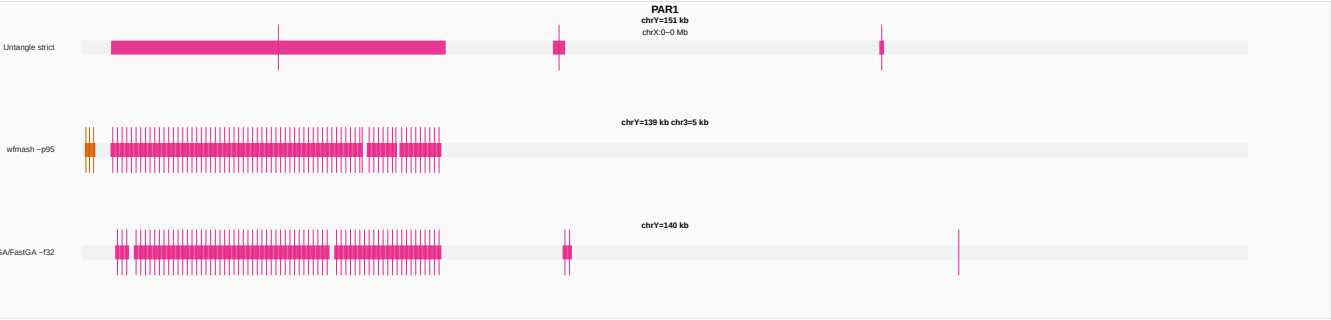

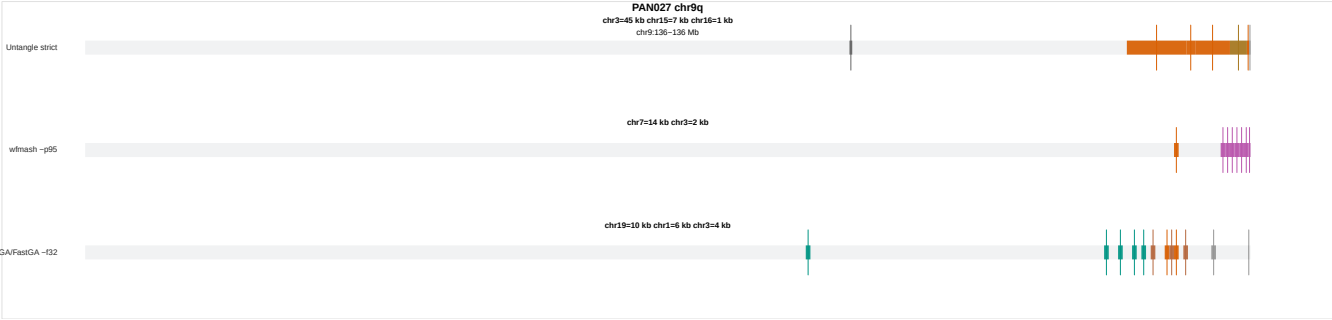

Fig5 whole-genome target support: PAN028 maternal hap1 <– PAN027 mother

Each chromosome is one native query-coordinate row; row length is proportional to actual query chromosome length. Colored ticks/blocks mark retained interchromosomal target support.

Candidate-window zooms: exact native query intervals
