

Slide 07c candidate: unrooted NJ with acrocentric p arms explicit

Same 41x41 arm-level Jaccard matrix as v2; purple C7 tips are chr13p, chr14p, chr15p, chr21p, chr22p.

Acrocentric p-arm status

All five expected acrocentric p arms  
  
are present in the 41x41 matrix and  
  
appear as distinct tips on the NJ tree.

| Arm | signal rows | matrix  | tree tip |
|-----|-------------|---------|----------|
| 13p | 76          | present | distinct |
| 14p | 229         | present | distinct |
| 15p | 119         | present | distinct |
| 21p | 116         | present | distinct |
| 22p | 223         | present | distinct |

Collapsed or filtered?

No. C7 is monophyletic; each acrocentric p arm has its own tip.

Excluded from matrix

Zero-signal arms: chr2\_p, chr3\_p, chr5\_p,  
  
chr8\_q, chr11\_q, chr14\_q, chr18\_q. These  
  
are not acrocentric p arms; chr14q is the  
  
acrocentric q arm with zero signal.
