

PHR length distribution by chromosome end

Each row is one chromosome end; q arms are flipped so the heatstrip reads p telomere to q telomere.
Color is within-end share per 10 kbp bin. Terminal windows were 500 kbp; >500 kbp was not measured.

Source: all-vs-all.1Mb.p95.id95.len.tsv | 41/48 ends have called intervals; zero-signal ends: 2p, 3p, 5p, 8q, 11q, 14q, 18q | bin width = 10 kbp
