

Whole-genome homologous inheritance context with non-homologous winners

Light-gray ribbons are full same-chromosome father-child homologous chains; colored ribbons are interchromosomal winners from the same 10:10 IMPG scan.

Ribbon classes

- same chromosome homologous (364)
- PAR1 non-homologous (2)
- chr5q/chr1p (2)
- chr9q/chr3q (1)
- acrocentric (50)

Light gray: 364 full same-chromosome chains ≥ 50 kb; gray glyph width encodes chain length at ~ 10 kb/px, capped at 2.6 Mb.

All tracks use native whole-genome coordinates collapsed into length-scaled chromosome-order tracks.
