

a HG002 Pore-C inter-arm contact matrix at 50 kb, ordered by sequence community

B/W = 0.056 p = 3.9e-85 77 arm-haplotypes diagonal blocks = communities

c S_all (7 non-sharing arms) reverses the community signal

b Convergent evidence ... 14 tests, 6 technologies

all on within-community-stronger side of unity

d Flanking paradox ... unique-sequence flanks > PHRs

100 kb centromere-ward of PHR boundary; B/W as in (b)
