

Fig5 prototype: strict-path synten/recombination schematic

Geometry comes from selected_segments.tsv; autosomal PHR rows are candidate exchange-compatible patches, not event-level validation.

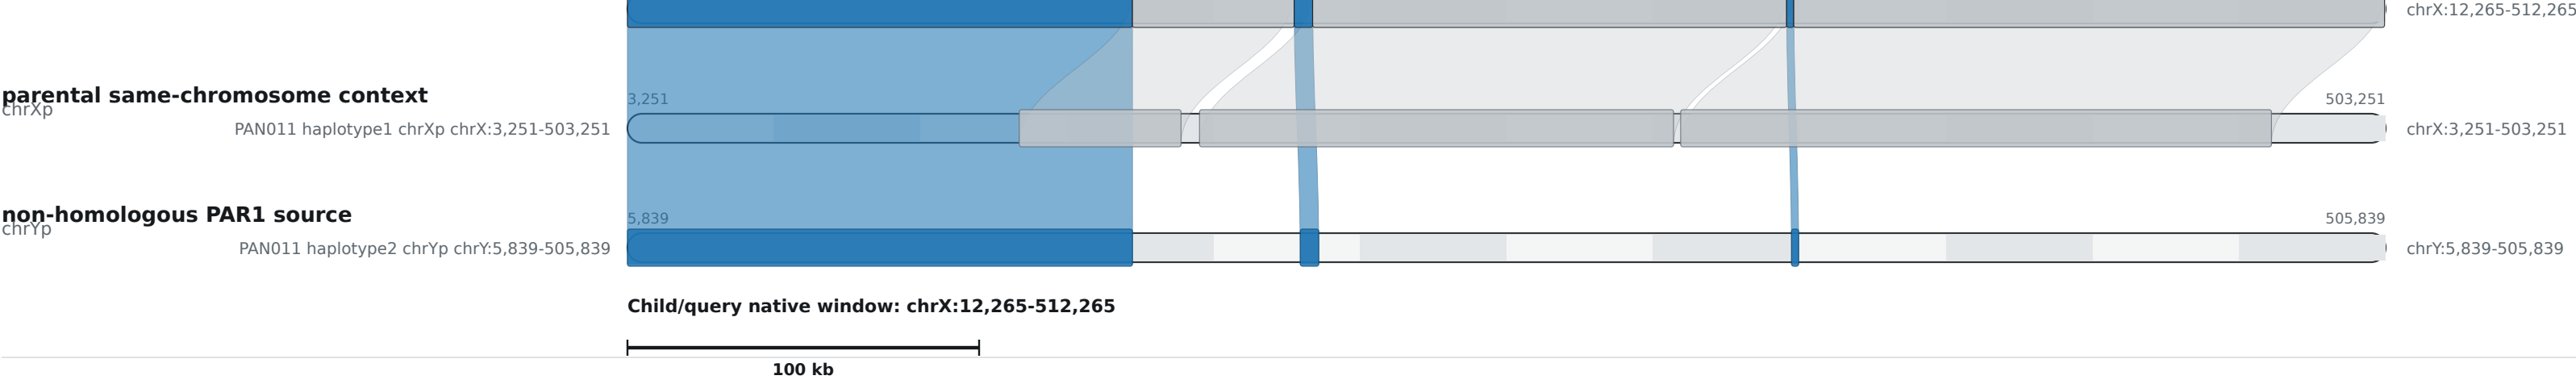

Flow legend PAR1 positive-control flow primary PHR donor flow side fragment low-confidence tail same-chromosome context

1. PAR1 positive control

PAN027 paternal hap2 <- PAN011 father

PAR 151 kb; same-chr 349 kb

recombinant/child: PAN027#2#chrX.paternal:12265-512264_chrX_parm

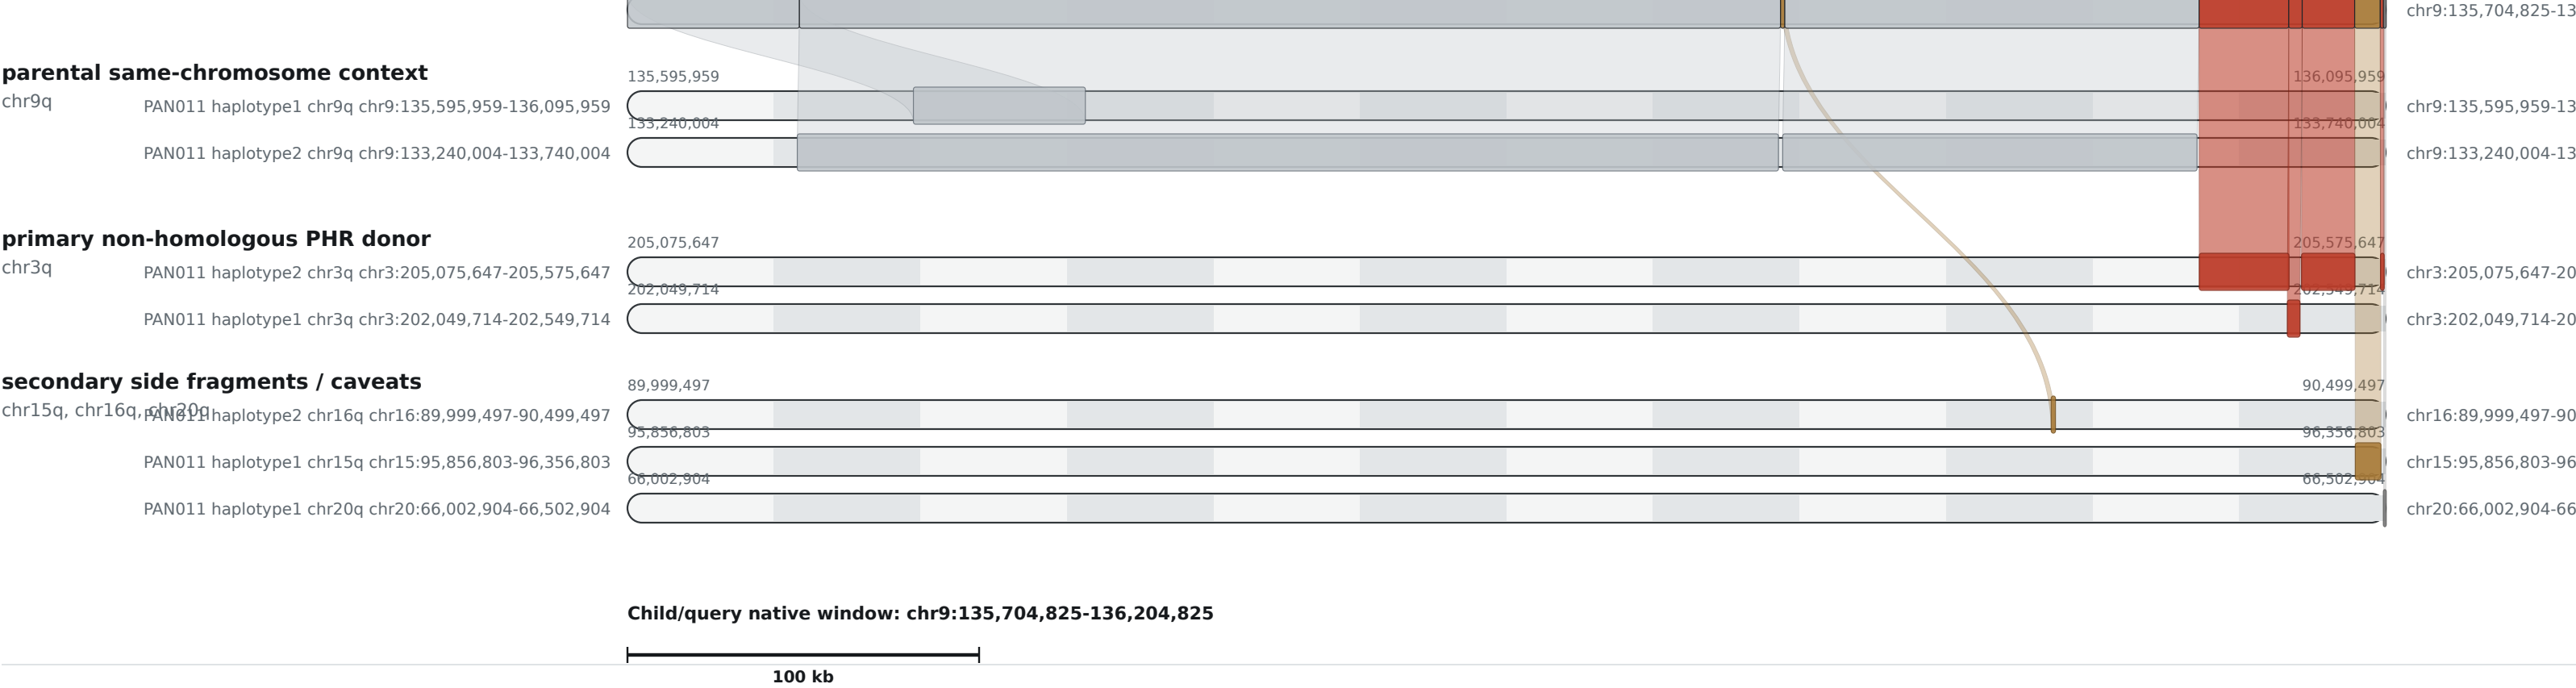

2. PHR candidate 1: PAN027 chr9q with chr3q donor

PAN027 paternal hap2 <- PAN011 father

primary donor 45 kb; side fragments 8 kb; low-conf. tail 493 bp; same-chr 446 kb

recombinant/child: PAN027#2#chr9.paternal:135704825-136204824_chr9_qarm

3. PHR candidate 2: PAN028 strict chr9q path

PAN028 maternal hap1 <- PAN027 mother

primary donor 34 kb; side fragments 16 kb; same-chr 449 kb

recombinant/child: PAN028#1#chr9.haplotype1:134380985-134880984_chr9_qarm
