

# Whole-genome 10:10 SweepGA/F32 donor ribbons with homologous-competition context

Colored ribbons are interchromosomal/non-homologous winners; light-gray ribbons are the paired same-chromosome homologous best-match competitors.

**Ribbon classes** ■ PAR1 positive control (2) ■ chr5q/chr1p candidate (2) ■ chr9q/chr3q candidate (1) ■ acrocentric (50) ■ acro-other (4)

■ same-chromosome homologous best-match competitors (90)

Drawn: 59 colored interchrom runs (1.12 Mb) plus 90 light-gray homolog competitor runs (1.12 Mb).

All coordinates are native whole-genome coordinates collapsed into length-scaled chromosome-order tracks.
