

HG002 Pore-C contacts ordered by sequence community

v4 orientation fix: X left = first ordered column; X right = last ordered column

blue boxes = arm-level sequence communities C1-C15 in displayed row/column coordinates

Y top-to-bottom: FIRST chr4_MATERNAL_q (C1) -> LAST chrY_PATERNAL_p (C15)

B/W = 0.056 p = 3.9e-85 source within/between TSV checked

X left-to-right: FIRST chr4_MATERNAL_q (C1) -> LAST chrY_PATERNAL_p (C15)

Corrected raster policy: draw color_matrix directly; v3's raster transpose mirrored X.
