

Nearest same-superpopulation neighbor in displayed MDS space

Each point contributes one Euclidean D1-D2 distance to the nearest other point from the same continental superpopulation.

Metric: nearest other point from the same continental superpopulation in displayed D1-D2 MDS space; self excluded.
KW = Kruskal-Wallis global non-parametric test across groups. Pairwise Wilcoxon = rank-sum group comparisons.
BH = Benjamini-Hochberg FDR correction over pairwise tests. Brackets show five strongest BH-significant contrasts; full table is in nearest_same_superpop_pairwise_wilcoxon.tsv.
